Combined Cycle Systems for Near-Zero Emission Power Generation (Woodhead Publishing Series in Energy)

Combined Cycle Systems for Near-Zero Emission Power Generation (Woodhead Publishing Series in Energy)

Combined cycle power plants are one of the most promising ways of improving fossil-fuel and biomass energy production. The combination of a gas and steam turbine working in tandem to produce power makes this type of plant highly efficient and allows for CO₂ capture and sequestration before combustion. This book provides a comprehensive review of the design, engineering and operational issues of a range of advanced combined cycle plants.

After introductory chapters on basic combined cycle power plant and advanced gas turbine design, the book reviews the main types of combined cycle system. Chapters discuss the technology, efficiency and emissions performance of natural gas-fired combined cycle (NGCC) and integrated gasification combined cycle (IGCC) as well as novel humid air cycle, oxy-combustion turbine cycle systems. The book also reviews pressurised fluidized bed combustion (PFBC), externally fired combined cycle (EFCC), hybrid fuel cell turbine (FC/GT), combined cycle and integrated solar combined cycle (ISCC) systems. The final chapter reviews techno-economic analysis of combined cycle systems.

With its distinguished editor and international team of contributors, Combined cycle systems for near-zero emission power generation is a standard reference for both industry practitioners and academic researchers seeking to improve the efficiency and environmental impact of power plants.

- Provides a comprehensive review of the design, engineering and operational issues of a range of advanced combined cycle plants
- Introduces basic combined cycle power plant and advanced gas turbine design and reviews the main types of combined cycle systems
- Discusses the technology, efficiency and emissions performance of natural gas-fired combined cycle (NGCC) systems and integrated gasification combined cycle (IGCC) systems, as well as novel humid air cycle systems and oxy-combustion turbine cycle systems

From reader reviews:

Lola Taylor:

What do you regarding book? It is not important along? Or just adding material when you need something to explain what the one you have problem? How about your extra time? Or are you busy particular person? If you don't have spare time to complete others business, it is give you a sense of feeling bored faster. And you have extra time? What did you do? Every individual has many questions above. They need to answer that question simply because just their can do that. It said that about e-book. Book is familiar on every person. Yes, it is right. Because start from on pre-school until university need this specific Combined Cycle Systems for Near-Zero Emission Power Generation (Woodhead Publishing Series in Energy) to read.

Ira Gonzalez:

Reading a publication can be one of a lot of action that everyone in the world likes. Do you like reading book so. There are a lot of reasons why people love it. First reading a reserve will give you a lot of new facts. When you read a reserve you will get new information simply because book is one of many ways to share the information or perhaps their idea. Second, examining a book will make you more imaginative. When you looking at a book especially fiction book the author will bring you to definitely imagine the story how the personas do it anything. Third, you are able to share your knowledge to other people. When you read this Combined Cycle Systems for Near-Zero Emission Power Generation (Woodhead Publishing Series in Energy), you could tells your family, friends as well as soon about yours publication. Your knowledge can inspire the others, make them reading a guide.

Leticia Bennet:

The guide untitled Combined Cycle Systems for Near-Zero Emission Power Generation (Woodhead Publishing Series in Energy) is the guide that recommended to you to study. You can see the quality of the e-book content that will be shown to you. The language that author use to explained their way of doing something is easily to understand. The article writer was did a lot of investigation when write the book, to ensure the information that they share to your account is absolutely accurate. You also can get the e-book of Combined Cycle Systems for Near-Zero Emission Power Generation (Woodhead Publishing Series in Energy) from the publisher to make you considerably more enjoy free time.

Eva Lynch:

The book untitled Combined Cycle Systems for Near-Zero Emission Power Generation (Woodhead Publishing Series in Energy) contain a lot of information on it. The writer explains the girl idea with easy approach. The language is very simple to implement all the people, so do not really worry, you can easy to read the item. The book was written by famous author. The author provides you in the new time of literary works. You can easily read this book because you can please read on your smart phone, or program, so you can read the book within anywhere and anytime. If you want to buy the e-book, you can available their

official web-site along with order it. Have a nice examine.
