activity-based statistics Richard L. Scheaffer, Ann Watkins, Jeffrey Witmer, Mrudulla Gnanadesikan

The second edition of **Activity-Based Statistics**, revised by Tim Erickson, remains true to the vision of the original, highly respected author team: A set of basic, hands-on, exploratory activities that can be completed without the use of technology. Because these activities are designed to be conducted with materials that are easily obtainable (coins, dice, pasta, paper, marbles, and so on), their implementation is made easy for any instructor without regard to budget concerns or technology proficiency. By making the activities fun and engaging the authors are promoting the idea that statistics is, indeed, an experimental science.

With over 40 activities from which to choose, instructors should easily find many that are appropriate for both the college introductory course curricula and AP Statistics. Using **Activity-Based Statistics** in addition to any standard introductory statistics text helps students experience statistics in context and discover its everyday relevance. Activities can be introduced once students have become familiar with standard statistics topics. The directions for each activity are simple and easy to understand, and most can be completed in one 50-minute class period.

The Instructor Resources includes a CD-ROM which includes: data sets for the book's activities rendered in: Fathom, Excel, and Minitab. The CD also includes a limited use version of Fathom Dynamic Statistics™ software from Key Curriculum Press to allow instructors to present or demonstrate data from the text within the Fathom environment.

From reader reviews:

Jeremy Richards:

In other case, little folks like to read book activity-based statistics. You can choose the best book if you'd prefer reading a book. So long as we know about how is important a new book activity-based statistics. You can add know-how and of course you can around the world with a book. Absolutely right, mainly because from book you can understand everything! From your country right up until foreign or abroad you will end up known. About simple point until wonderful thing you could know that. In this era, we could open a book or even searching by internet unit. It is called e-book. You should use it when you feel uninterested to go to the library. Let's read.

Roger Lindsey:

What do you ponder on book? It is just for students because they are still students or this for all people in the world, the particular best subject for that? Only you can be answered for that problem above. Every person has several personality and hobby for every single other. Don't to be forced someone or something that they don't desire do that. You must know how great along with important the book activity-based statistics. All type of book could you see on many sources. You can look for the internet sources or other social media.

Martina Smith:

As people who live in often the modest era should be change about what going on or facts even knowledge to make these keep up with the era and that is always change and make progress. Some of you maybe will probably update themselves by studying books. It is a good choice in your case but the problems coming to a person is you don't know what one you should start with. This activity-based statistics is our recommendation to make you keep up with the world. Why, because book serves what you want and want in this era.

Allen Schlemmer:

Many people spending their moment by playing outside together with friends, fun activity along with family or just watching TV 24 hours a day. You can have new activity to spend your whole day by looking at a book. Ugh, ya think reading a book will surely hard because you have to bring the book everywhere? It all right you can have the e-book, taking everywhere you want in your Smart phone. Like activity-based statistics which is keeping the e-book version. So , why not try out this book? Let's see.
