Enhancing Software Quality with Networked Thinking Alfons Unmuessig

Abstract

The presentation explains a method for further optimizing software quality and software error prevention. The current measures, e.g. the quality of the requirements analysis as an important influence factor of error prevention / software quality, are not replaced but looked at in a networked way before they are applied. The basic of the networked way is the networking of important measures e.g. quality of requirement analysis, workload of the employees, leadership of the management, achieved process maturity level (CMMI or SPICE,..) quality culture to get software quality. This allows us to recognize the priority of each individual measure by calculating the direct and indirect influence of the influence factors to software quality . The method/approach mainly focuses on the first three phases of the software development process: requirements analysis, specification, and design. The basis for the approach is networked thinking, which is supported by a software tool for the networking of the influencing factors and their analyses. See number [0], [4] of the references at the end of the presentation. The influencing factors are networked and their respective sum of direct and indirect influences on the target figure "software quality/error prevention" is calculated with the above mentioned software tool and depicted in a "results matrix".

Contents of the presentation

1. Motivation
2. Basis
3. Objectives
4. Procedure
5. Results
6. Practical Information
7. Conclusion & Outlook

Due to the prioritized presentation of the relationship between the influencing factors in the results matrix, the need for action for optimizing the software quality/error prevention can be deduced. Top priority influencing factors like e.g. motivation of the employees must be given high priority in practice.

The procedure of networked thinking proposed here can also be applied to many other areas of technology, medicine, biology, physics, urban planning, energy transition etc.

From reader reviews:

John Richey:

Often the book Enhancing Software Quality with Networked Thinking has a lot of information on it. So when you check out this book you can get a lot of benefit. The book was published by the very famous author. The author makes some research before write this book. This kind of book very easy to read you can find the point easily after reading this article book.

Keith Cochran:

Precisely why? Because this Enhancing Software Quality with Networked Thinking is an unordinary book that the inside of the book waiting for you to snap the item but latter it will distress you with the secret it inside. Reading this book alongside it was fantastic author who all write the book in such awesome way makes the content inside easier to understand, entertaining approach but still convey the meaning entirely. So , it is good for you for not hesitating having this ever again or you going to regret it. This book will give you a lot of positive aspects than the other book have got such as help improving your ability and your critical thinking way. So , still want to delay having that book? If I ended up you I will go to the book store hurriedly.

Miranda Wenger:

Enhancing Software Quality with Networked Thinking can be one of your beginner books that are good idea. We all recommend that straight away because this book has good vocabulary that can increase your knowledge in language, easy to understand, bit entertaining but nonetheless delivering the information. The copy writer giving his/her effort that will put every word into pleasure arrangement in writing Enhancing Software Quality with Networked Thinking nevertheless doesn't forget the main level, giving the reader the hottest and also based confirm resource details that maybe you can be one of it. This great information can drawn you into fresh stage of crucial imagining.

Betty Dunham:

Many people said that they feel weary when they reading a guide. They are directly felt it when they get a half portions of the book. You can choose often the book Enhancing Software Quality with Networked Thinking to make your reading is interesting. Your own skill of reading expertise is developing when you such as reading. Try to choose easy book to make you enjoy to see it and mingle the sensation about book and reading especially. It is to be 1st opinion for you to like to start a book and go through it. Beside that the guide Enhancing Software Quality with Networked Thinking can to be your friend when you're feel alone and confuse with the information must you're doing of these time.
